

ALTECH ALLINE SPECIAL

Labeling System

The ALLine Special labeling system can be configured to meet specific labeling requirements.

Multiple labeling in several positions or corner application of tamper-proof seals is possible thanks to the integration of extremely reliable and proven modular devices. Labeling of fast-moving cylindrical products can be performed by means of a special continuous or alternate-motion horizontal rollers conveyor.

Possible labeling solutions

- Multiple labeling in various product positions
- Corner application of tamper-proof seal labels
- Label application on unstable cylindrical products
- Oversized and motorized label unwinder units
- NON-STOP configurations with automatic activation of multiple heads.

Format changes are assisted by the microprocessor with stored format parameters. The necessary mechanical adjustments have been minimized, engineered so that every component can be repeatedly positioned in a simple and reliable manner and firmly secured for machine operation.

Options

All ALLine systems can be equipped with a range of optional components to increase their running time and performance:

- High-precision adjustment systems for head inclination and revolution counters for adjustment handles
- Batch or expiry date markers
- Rotary infeed and outfeed tables
- Product flow monitoring devices (minimum infeed/outfeed)
- Label application confirmation with automatic ejection.

All ALLine labelers are designed according to cutting edge designing criteria which make every machine suitable for even the harshest of conditions, guarantee great labelling accuracy even at high production speeds and feature a high degree of operator-friendliness, as the start and change-over operations are particularly simple and intuitive.
